RE-ENGINEERED OFFICE EQUIPMENT

re-store: to give back; make return or restitution of (anything taken away or lost).

Don't settle for remanufactured or reconditioned. DeMAND ReSTORED!

ReSTORED OFFICE EQUIPMENT from Adams Remco combines the highest principles of re-engineering as well as our own strict internal standards. The result of this unique process is systems ReSTORED to an as new condition.

Not every pre-owned copier makes the cut into our restoration program. In fact, only a few select machines are ever chosen; once accepted into this exclusive program they are subjected to rigorous testing. The machine must pass every phase of the qualification process. Then and only then will the system receive approval and become a certified member of our ReStored Office Product Fleet.

OUR RESTORATION PROCESS begins with disassembling the machine right down to the frame. All areas of the main frame, sub-assemblies and accessories are strictly scrutinized and categorized prior to undergoing an exacting restoration process. Critical parts designated by life cycles from the Original Equipment Manufacturer are replaced without question. In addition, we apply this same methodology to any parts showing the slightest sign of wear or damage. We then focus on cosmetics. Exterior panels are cleaned or in many cases replaced to ensure a new appearance.

We are proud to adhere to the highest standards of restoring office equipment. Close observance to guidelines and stringent internal policies will make acquiring previously owned office equipment a high quality, safe and economical decision for your business.

Don't buy remanufactured or reconditioned. BUY ReSTORED.

Count On It.

- A suitable product is selected
- The system is stripped down to the frame
- Subassemblies are all removed, and the machine is inspected for any unusually worn parts, rollers, gears etc.
- Replacement parts are then ordered (Up to 45 different parts are replaced!)
- The machine is then blown out with high pressure air to remove any remaining dust and toner.

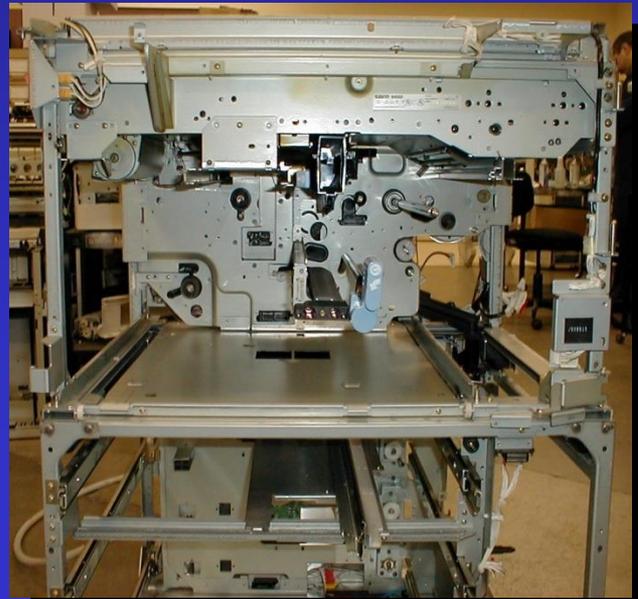

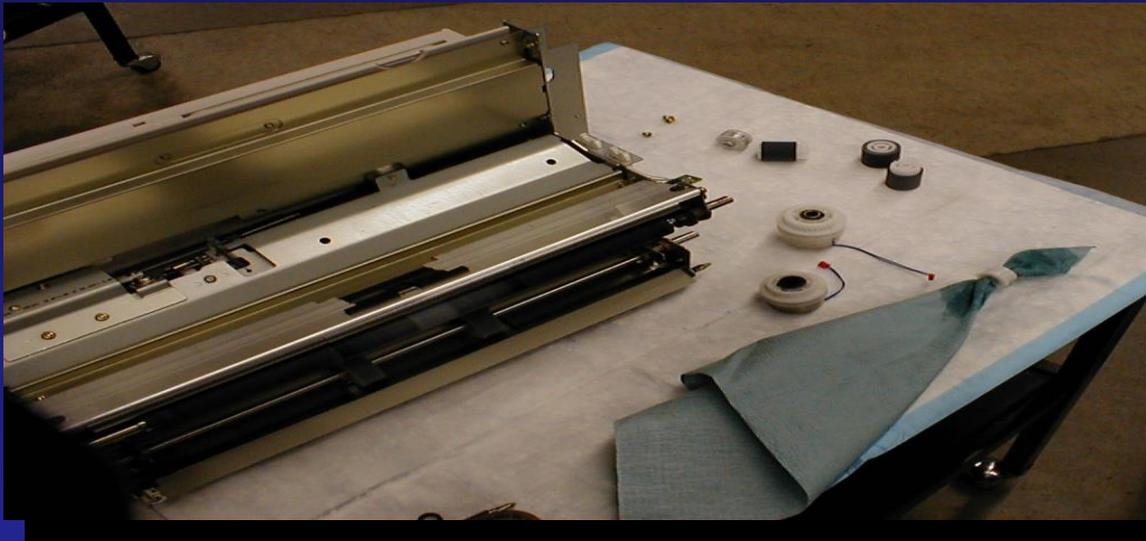

•The system, after being stripped down to the frame is...

- Wiped down
- Gears are cleaned or replaced
- Bushings are also cleaned or replaced and lubed

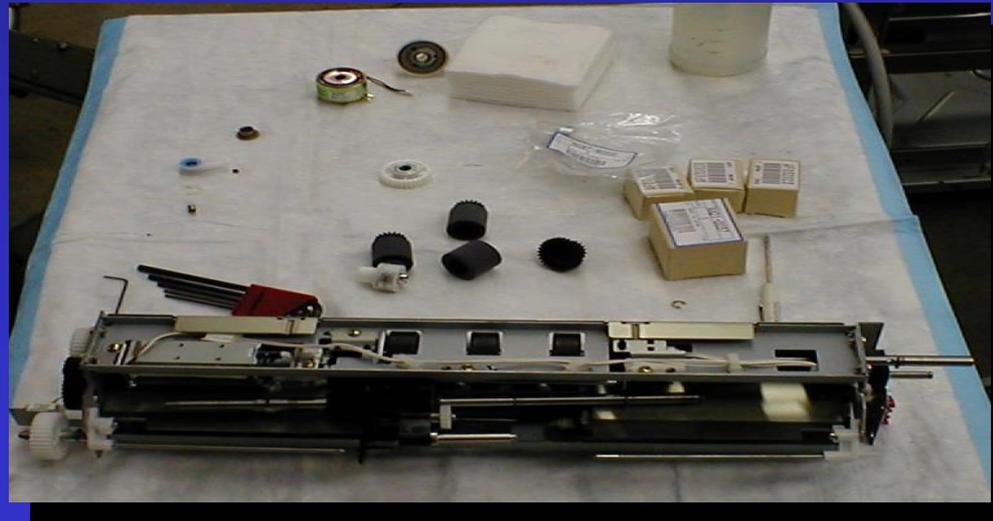

Subassemblies are removed, cleaned and the parts replacement begins

One by one each assembly is taken apart and thoroughly cleaned. All worn or broken parts are replaced.

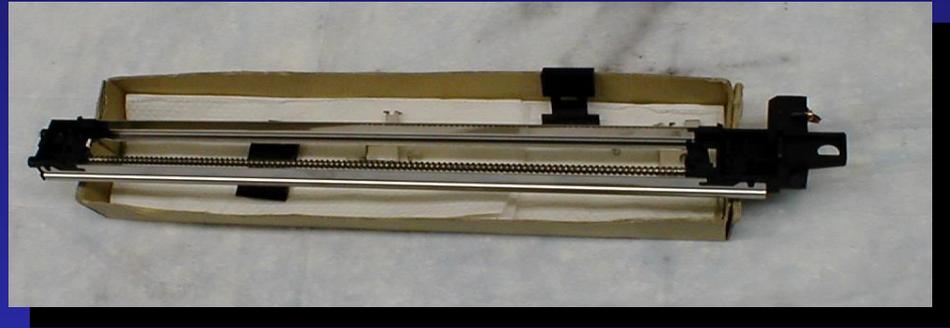

Registration and Bypass Assembly

Feed Unit Assembly

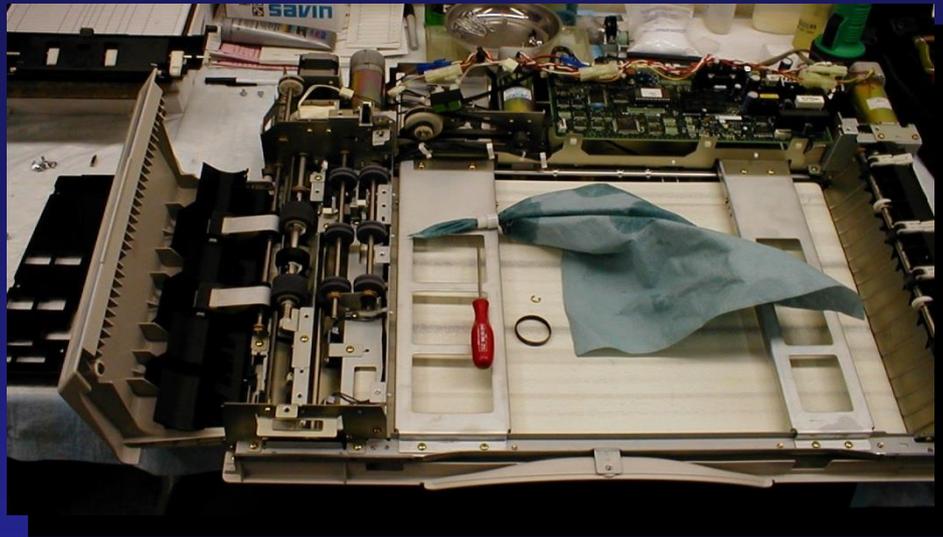

Drum Assembly

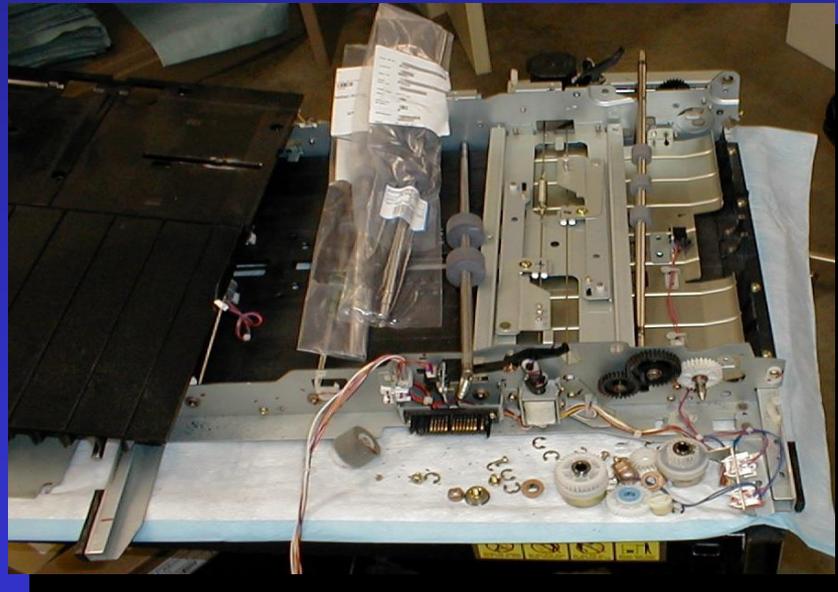

Corona Assembly

Fusing Unit

Document Feeder

Duplex Unit

As each assembly is completed they are re-installed in the machine

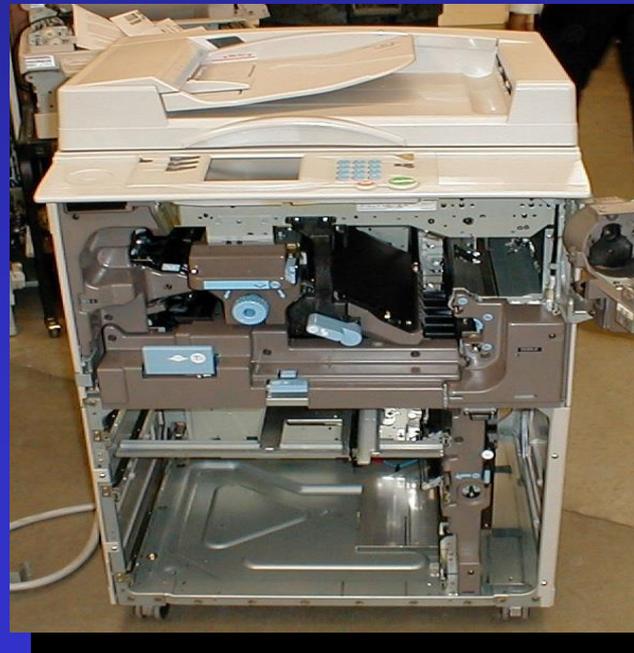

Slowly the system starts to take on the shape of a copier once again

Once the assemblies are completed attention is then turned to the covers. They are all cleaned or painted, if need be. Any broken parts are replaced and all decals are replaced.

One by one the covers are re-installed in preparation for the testing phase.

Each product is tested thoroughly!! All features are tested and the system is adjusted back to the factory default settings. Approximately 5,000 copies will be run on each machine.

When the testing phase is completed...

The product is shrink wrapped, loaded onto one of our trucks, and delivered to your business with tender loving care!
